**Subject:** Re: FW: CSO-SWO parameters

Alice:

I'll get you an answer, but I suspect that we do not need these data. CPG is not holding up the RI/FS Model waiting for any CSO data.

Did they explain a reason - are they doing a field mod or QAPP Addendum to document this change? Could we see it?

Thanks

Rob

Tierra is proposing to drop the following parameters from the CSO-SWO sampling program: DO, pH, oxidation reduction potential (ORD).

Can you tell me whether these are parameters that you need in order to use or interpret the CSO-SWO contaminant data that will be produced from the sampling?

(P.S. Ed Garland tells me that these are NOT parameters that the model would need.)
